

New Features in TerraPhoto

Arttu Soininen

Software developer

Terrasolid Ltd

Place Selection Shape

Paint Selection Shape

- **Select image with separate click** makes it possible to specify an island where to use specific image

Various improvements

- Support for Belgium Lambert 72 / BEREFF 2003
- Import Applanix smrmsg_XXXX.out files
- Reads accuracy information from IPAS SOL files
- **By level** option for color, weight and style in V8
- Improvements in automatic tie point search
- Supports TerraScan's new options in **Extract color from images**
- Support for LAS 1.1 and LAS 1.2

Change Image Active Setting

- Includes / excludes an image from rectification
- Image is still part of image list but will not appear in orthomosaic
- Nice for:
 - testing what images can be removed
 - excluding images from ortho while keeping them as part of tie point solution
